

Tower Inspection Report

Field	Details
Report ID	TIR-2025-005
FCC ASR Number	A1345937
Owner	AT&T Mobility Services LLC
Location	94 Angel Lane (WV283D), Kenova, WV
Coordinates	Lat 38.352139, Lon -82.514139
Tower Type	Lattice Tower
Overall Height (AGL)	59.4 m
Structure Height	60.7 m
Registration Status	Active, Construction Permit Issued
Registration Date	09/30/2025
FAA Study Number	2013-AEA-3668-OE
Inspection Date	2025-02-18
Inspector	K. Williams

Structural Assessment

Lattice tower structure generally sound. Cable management requires attention – several cable hangers missing at 30m level, causing cable sag. Antenna mounting brackets secure. Feed line weatherproofing at top connector showing degradation.

Visual Inspection – Cable Routing

Visual Inspection – Antenna Configuration

Grounding & Lightning Protection

Grounding resistance: 3.8 Ω (within spec but trending upward from previous reading of 2.9 Ω).
Recommend ground rod assessment at next cycle.

Summary

Cable management remediation and weatherproofing repairs needed. Ground system showing degradation trend – schedule ground rod assessment. Priority: MEDIUM. Next scheduled inspection: 2025-06-18.

Data Source: [FCC Antenna Structure Registration \(ASR\) Database](#) – U.S. Federal Communications Commission. Tower registration data is public record.

Technical Documentation

Antenna Radiation Pattern

1700 MHz (AWS) radiation pattern for lattice tower deployment. Mid-band frequency balances coverage and capacity. 65° sector beamwidth with 7° electrical downtilt.

Tower Elevation Drawing

Lattice tower elevation ~ 59.4m AGL (60.7m structure). Antenna mounts at 57.4m, 54.4m, and 51.4m. Cable routing path shown along tower leg with cable hangers at 3m intervals.

FCC OET-65 compliance zones for 1700 MHz. Occupational exclusion: 4.9m. General public exclusion: 12.3m. EIRP: 48 dBm. Cable loss noted at 30m level may affect actual radiated power.

Predicted Coverage Map

Predicted coverage at 1700 MHz from 59.4m tower. Suburban environment with moderate building density.
Coverage radius approximately 8 km to cell edge (-105 dBm).
